

Laboratory of *Drosophila* Research
The Chinese University of Hong Kong
5th Anniversary 2002-2007

Hello! Nice to meet you all! I am Azaria, a new member of LDR. Before entering this lab, I worked on plant in my FYP. I have chosen this lab for my MPhil because I think *Drosophila* is a good genetic model for neuroscience research, which is of my great interest. After having worked here for half a year, I am deeply impressed by this lab. First of all, I find that Prof Chan is so special among other professors. He is so energetic that he always carries a smiling face; so considerate that he can understand our need; and so thoughtful that he always plans ahead. What's more is that my dear labmates are so nice and helpful to me no matter on studies or personal affairs. I really enjoy the life in LDR and hope that LDR will have a fruitful year.
